

SlideSet action

Background and rationale

[MoinMoin](#) provides a SlideShow action, however, with any presentation system it is useful to be able to include all slides in one document. That document could be used for printed handouts for the session, or as PDFs to be used afterwards.

SlideSet action

Description

This SlideSet action (a modification of the SlideShow action provided by [MoinMoin](#)) renders all slides in frames on a single page.

SlideSet action

Usage

The action can be called from the More actions: list or added to the page as `<<Action(SlideSet)>>`.

Another option is to use an attached image that links to the action, such as:

```
[[#|{{attachment:RileyLinkFiles/public/slideset.png|SlideSet|align="right",width=20}}|&action=SlideSet]]
```

This link is provided at the top right of this page, if you wish to give it a try. Note, this page has been set up to work with [slideshow_wiki.py](#) parser.

The action can also be evoked by appending the page URL with `?action=SlideSet`

SlideSet action

Prerequisites

The HTML slide template uses division ids, slide, content, slide_footer, slide_date, slide_author and slide_counter. For this to render well the css code in SlideSet.css (or similar) needs to be included in SlideShow.css in the Modernized theme.

Also see the requirement for a modified version of the refresh to remove cached versions of PDFs created for slides (see [PDF.py](#)).

SlideSet action

Download & Release Notes

Download	Release Version	Moin Version	Release Notes
SlideSet-1.0.py	1.0	1.9.2	

For installation, rename files to remove version number (e.g. -1.0).

SlideSet action

Examples

See the icons at the top right of this page.

Click the icon  to run the SlideSet action.

Also, you can get a PDF version by clicking the  icon. This PDF has one slide per page in landscape orientation, allowing a PDF viewer in full screen mode to be used to present the slides.

The  can be used to run the SlideShow action for this page.
